The Hydraulic Ram Pump, Hydram, or simply a Ram Pump is a pump that uses the water hammer W effect from built up water pressure. Using this pressure that has been created by a water source above the pump, it is able to lift water to an elevation higher than the pump. Using just two moving parts ... Hydraulic ram pumps - Appropedia: The sustainability wiki - Hydraulic fracturing flowback and produced water (HF-FPW) is a complex wastewater generated during oil and gas extraction. This study partially characterizes the chemical signature of two HF-FPW samples. Exposure to organic extracts from these two samples impaired the zebrafish embryo development including inducing pericardial edema and spinal malformations.
